

Guidance for Process Maps

Enclosed in the following folders are Process Maps for Clinical Audits. Essentially this is a guide to help Dentists carry out Clinical Audit in a more standardised and comparable way.

It is by no means meant to be prescriptive or to stymie the way in which individuals design their audits, or to restrict the choice of Audit topic. It is simply intended to provide an easy template for Dentists to follow when carrying out the Audits that CAPRAP have found to be particularly useful in identifying problems and making changes, whilst still being able to personalise the Audit to suit individual practices.

The vast majority of Audits would benefit from being followed up with a Re-Audit and CAPRAP would encourage Practitioners to re-audit regularly using a small sample size to ensure the benefit of improvements in care resulting from Clinical Audit are being maintained.
