

Part II

Approved List Of Chemical Reagents

Chemical Reagent	Quantity	Price
Detection Strips, Urine		
(Supplied with an instruction sheet, analysis record and colour chart)		
Detection Strips, urine for Glycosuria		
Diastix	50	2.96
Medi-Test Glucose	50	2.36
Detection Strips, urine for Ketonuria (<i>Acetonuria</i>)		
GlucorX KetoRx Sticks 2GK	50	2.25
Ketostix	50	3.13
Detection Strips. Urine for Proteinuria		
Albustix	50	4.42
Medi Test Protein 2	50	3.31
Detection Strips, Blood For Glucose		
(Supplied with an instruction sheet, analysis record and colour chart)		
Notes on the use of Blood Glucose Testing Strips (BGTS) are given in the appendix to Part II.		
Lancets are listed in Part III under 'Hypodermic Equipment'. Meters for use with BGTS or Discs are not available separately on Prescription Form HS21.		
Colorimetric Strips - Visually Readable		
Betachek Visual	50	5.50
Glucoflex-R	50	5.50
Biosensor Strips - to be read only with the appropriate meter		
4SURE	50	7.99
Advocate Redi-Code+	50	9.95
AgaMatrix Agile	50	5.43
AutoSense	25	4.50
Aviva	50	12.99

-----------------	---	-------

Part II - Appendix**Notes on Blood Glucose Testing**

- Blood glucose testing strips (BGTS) are primarily intended for insulin-dependent diabetics who will normally have received consultant advice on their condition. One pack (50 strips) would normally be sufficient for 2 months. All strips should be kept in their original container and should not be cut or slit. Because of the differences in colour change in colorimetric types, strips are not interchangeable.
Due regard should be given to the manufacturer's instructions and to the recommendation on storage and period of use after first opening.
- Misleading results, which could be hazardous if acted upon, might arise if users are inadequately trained. It is therefore essential that patients should receive appropriate training before attempting to use BGTS for monitoring their blood glucose. This instruction should be given by health care professionals who are trained in the use of the product. It should be noted that there are small variations in technique between different makes. Some technical factors are given in paragraph 5 below.
- General practitioners should be aware that defects in colour vision may occur in diabetes and certain BGT strips should not be prescribed for such patients for visual use. (see outline of colour changes described in each entry on the foregoing pages).
- Reagent Strips are subject to the following limitations:

Fluoride Specimen:	The strips are not to be used with blood specimens preserved with fluoride.
Serum and Plasma:	The strips are not designed for use with serum or plasma.
Haematocrit:	Extremes in haematocrit levels can affect test results:

Due regard should be given to the manufacturer's product specifications.

- Disposal of Lancets. Patients should be reminded of the need to exercise caution when disposing of used lancets. These should be placed in a tin or other strong container before disposal. **(The needle clipping device listed in Part III is not generally suitable for use with lancets).**

As with single-use syringes, the arrangements outlined above are not suitable for patients where there is a risk of infection being transmitted. General Practitioners are similarly advised that blood lancets should only be prescribed for patients who are carriers of infectious diseases where suitable arrangements have been made for the disposal of the used articles as contaminated waste. Medical Officers for environmental health can advise on these arrangements.
